Probability and Statistics using R

Lab Session-1

Course Code : MAT445

Date: 16.07.2026 **Time : 3:15PM - 4:15 PM**

Questions

1. Write an R program to check whether a given integer is even or odd.
2. Write an R program to check whether a given integer is a prime number.
3. Write an R program to check whether a given integer is a palindrome.
4. Write an R program to find the factorial of a positive integer.
5. Write an R program to find the sum of digits of a given integer.
6. Write an R program to count the number of digits in a given integer.
7. Write an R program to find the Greatest Common Divisor (GCD) of two integers.
8. Write an R program to find the Least Common Multiple (LCM) of two integers.
9. Write an R program to check whether a given integer is an Armstrong number.
10. Write an R program to find the largest of two integers.
11. Write an R program to swap two integers without using a third variable.
12. Write an R program to check whether a given integer is a perfect number.
13. Write an R program to check whether a given integer is a perfect square.
14. Write an R program to check whether a number is positive, negative or zero.
15. Write an R program to generate the multiplication table of a given integer.
16. Write an R program to reverse the digits of a given integer.
17. Write an R program to find all factors of a given integer.
18. Write an R program to check whether two integers are coprime.
19. Write an R program to check whether a given integer is divisible by both 3 and 5.
20. Write an R program to compute a^b using a loop without using the exponent operator.
